

Sprint 2 Burndown

Our burndown chart for sprint 2 is the chart above. As seen, we have completed our sprint as planned in time, however we only marked user stories as done towards the end, which is why our chart seems off. Our velocity changed from our sprint 1 as we did not properly assign user story points in sprint 1. We also did not complete a few user stories from sprint 1, which we completed in sprint 2. Our progress throughout the sprint was steady, however that is not reflected on the chart as we did not mark completed user stories as they were finished, only towards the end.
